

FSB 1106 is marked by the way it marries traditional styling to a wide range of classic hardware materials. It echoes the formal properties of its smaller brother FSB 1135. Technically speaking, though, it has had an FSB compensating bearing added in order to meet the requirements for heavy-duty AGL® and AGL® FS door furniture and there is now also a variant conforming to EN 179.

Recommended rose/backplate variants

Design: Christoph Mäckler  EN 179 model: FSB 1043

Wide-backplate set to order
